A Holistic Fleet Management and Tracking System for Optimized ROI

UbiQTrac Fleet Management Solution is a powerful real-time fleet management and tracking system which uses real-time GPS signals for tracking. The solution sends location information over mobile communication networks (GSM/ GPRS) to a secure server for real-time display and analysis reporting of fleet and driver movement. The solution is built with comprehensive features and user-friendly web-based analytical reports that help reduce operating costs and enhance productivity and security. It minimizes service interruptions and helps ensure the safety and on time delivery of passengers and goods.

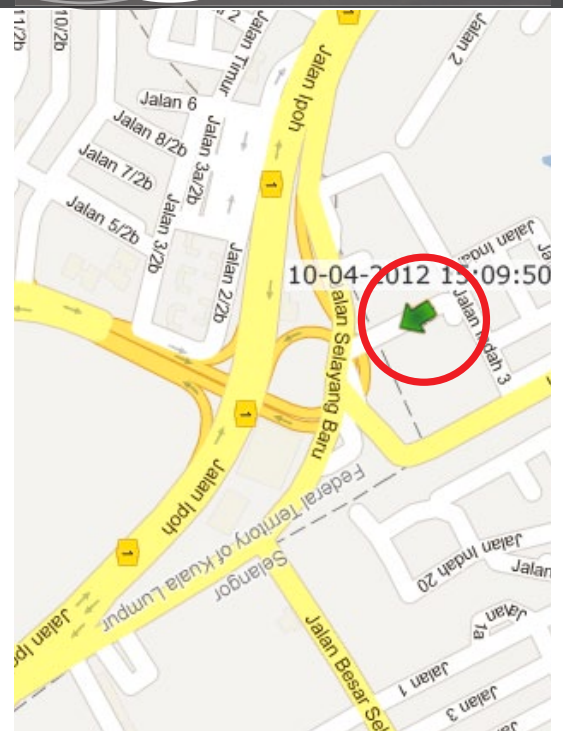

Benefits

- Increased driver efficiencies for better company productivity
- Maximized vehicle utilization for better ROI
- On-time deliveries for better customer satisfaction
- Enhanced route planning for overall efficiencies
- Improved driver, vehicle and cargo safety and security
- Reduced fleet operational cost for better margins
- On-the-road readiness and optimized vehicle performance

Optimising Your Business

- Take a load off your mind by using the system's service schedule and automatic reminders- Be reminded of due dates for insurance, road tax, licenses, servicing and regular maintenance
- Don't waste time and resources looking for vehicle particulars, repair history, insurance data, vehicle expenditure cost, etc- Store it all at one convenient location on the web!
- Never be caught out again- Print out your reports prior to every meeting with a few simple mouse clicks
- Stop guessing at the locations of your trucks - View them on the map
- Know your drivers' movements to ensure better customer satisfaction, productivity and effectiveness
- Export your data and reports into MS Excel, PDF and html format to enjoy complete versatility!
- Maximize your fuel expenses by monitoring the fuel consumption of every vehicle

Features

Real time vehicle tracking and live monitoring of vehicle movement

- Global coverage with Google Earth & Google Maps
- Detect unauthorized stop locations
- Fuel Level monitoring
- Monitor driving speed and provide speeding alerts
- Monitor vehicle idling time

Personalize preferred location names on map

- Allows the boundary of locations to be mapped

Route Geo Fence

- Allows the setup of a route geo fence. Vehicles are tracked and a notification is sent if the vehicle enters or exits a pre-defined area

Security

- Immobilize vehicle during off peak or when vehicle is not in use or stolen
- Panic button and SMS alerts during emergencies to increase driver, cargo and vehicle safety

Analytical reports allow management to best manage the entire fleet

- Comprehensive reports to monitor vehicle and driver performance such as Excessive Idling, Harsh Braking, Speeding, Mileage, Fuel analysis, Tow Aways, etc.

Fleet Management

- Road Tax, Insurance, Vehicle Inspection & Vehicle Service Reminder
- Reminder will be shown on My Dashboard
- Reminder through SMS & E-mail
- Allows reminders to be set by number of days prior to each due date
- Allows service reminders to be set by mileage or number of days - Chart comparison for all vehicles in the fleet
- Able to view comparison of vehicle expenditure. Serves as an analytical tool for identifying vehicles that incur high operational costs
- Detailed listing of each vehicle's service & repair history

Driver Management

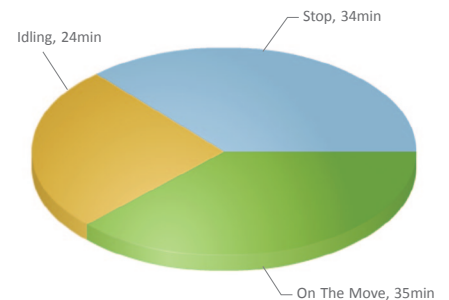

- Keeps track of driver profiles such as driver personal details, employment history, working experience
- Keeps track of driver traffic offences, accidents and speeding records
- Allows management to analyse and compare driver performance using various parameters such as speeding and traffic offences

Route History - Tracking detailed movement of vehicle on Google Earth

Pre-defined location in Geo Fence to track when vehicle enters or exits specific area

Analytical Report of Vehicle Activity in Pie Chart format
